

# HOW WE'RE KEEPING OUR CLINICS SAFE

## Temperature Checks

Upon arrival at the clinic, all teammates have their temperature taken. Teammates with a temperature of 100.0 degrees or higher return home, seek medical attention, and do not return to work until fever free for at least 3 days.

## Signs and Symptoms

Teammates stay home if they have COVID symptoms such as coughing, feeling achy, or difficulty breathing.

## Masks and Gloves

Teammates are encouraged to wear masks when interacting with others. Gloves are provided when appropriate for patient care and per employee discretion.

## Hand Washing

20 seconds is the amount of time we take to wash our hands with soap and water.

## Social Distancing

6 feet is the amount of space we keep from others when possible (if not treating a patient.)

## Diligent Cleaning

We continue to be diligent with our environmental cleaning between patients.

## A Note About Testing

Regular testing for COVID-19 would help keep our team and our patients safe. But, for this to work, the U.S. would need vastly more testing capacity than is currently available. Once state health departments begin to offer testing for healthcare workers, we will devise testing protocols based on local availability and free of charge to teammates. We also hope to provide antibody testing as it becomes available as well.
